

Alameda County has an elevated risk profile. Boron is detected in ~100% of wells, driven by sources. Contamination is often invisible — testing is the only way to confirm your well's safety.

YOUR TOP WATER QUALITY RISKS

CONTAMINANT	HOW COMMON	RISK LEVEL	SOURCE & CONTEXT
Boron	~100% of wells	High	
Manganese*	~40% above aesthetic limit	Moderate	Geological — Found in reducing aquifer zones alongside iron
Nitrate	~17% above limit	High	Agricultural — Fertilizer, manure, and septic systems leaching into groundwater
PFOS	~16% above limit	High	Industrial — Firefighting foam and industrial discharge
Chloride*	~13% above aesthetic limit	Moderate	Road/Geological — Road salt application and natural mineral deposits

* Secondary standard — an aesthetic limit for taste, odor, or staining. Not a health-based EPA limit.

WHAT TO DO NEXT

- Order a water test.**
Test for Boron, Manganese, Nitrate, PFOS, coliform bacteria. Bacteria annually; others every 3–5 years.
- Get your free county report.**
See full data, treatment options, and certified labs at <https://yourwaterreport.com/states/ca/alameda-county/>
- Upload your lab results.**
We'll interpret them, flag anything above limits, and recommend next steps — free.

WHAT YOUR RESULTS MEAN

Use this to interpret your lab report — match the contaminant to your result.

IF YOUR TEST SHOWS	WHAT IT MEANS	CONSIDER
Bacteria detected	Immediate concern	Shock chlorination; add UV system
Manganese > 0.05 mg/L	Aesthetic + health concern at high levels	Oxidation + filtration system
Nitrate > 10 mg/L	EPA limit exceeded — risk for infants	RO filter; avoid for bottle-fed infants
PFOS detected	Health advisory level	Reverse osmosis filter

WHO SHOULD USE THIS

- Homeowners on private wells — not covered by public water testing
- Home buyers doing due diligence before closing
- Families with infants, elderly, or immunocompromised members
- Anyone who hasn't tested their well in the past 3 years
